

Spring Security Syllabus

Spring Security training Course content:

I. Getting Started

1. Introduction

1.1. What is Spring Security?

1.2. History

1.3. Release Numbering

1.4. Getting Spring Security

2. Security Namespace Configuration

2.1. Introduction

2.2. Getting Started with Security Namespace Configuration

2.3. Advanced Web Features

2.4. Method Security

2.5. The Default AccessDecisionManager

2.6. The Authentication Manager and the Namespace

3. Sample Applications

3.1. Tutorial Sample

3.2. Contacts

3.3. LDAP Sample

3.4. CAS Sample

3.5. Pre-Authentication Sample

4. Spring Security Community

4.1. Issue Tracking

4.2. Becoming Involved

4.3. Further Information

II. Architecture and Implementation

5. Technical Overview

5.1. Runtime Environment

- 5.2. Core Components
- 5.3. Authentication
- 5.4. Authentication in a Web Application
- 5.5. Access-Control (Authorization) in Spring Security
- 5.6. Localization

6. Core Services

- 6.1. The,AuthenticationManagerProviderManager and AuthenticationProviders
- 6.2. UserDetailsService Implementations
- 6.3. Password Encoding

III. Web Application Security

7. The Security Filter Chain

- 7.1. DelegatingFilterProxy
- 7.2. FilterChainProxy
- 7.3. Filter Ordering
- 7.4. Request Matching and HttpFirewall
- 7.5. Use with other Filter-Based Frameworks

8. Core Security Filters

- 8.1. FilterSecurityInterceptor
- 8.2. ExceptionTranslationFilter
- 8.3. SecurityContextPersistenceFilter
- 8.4. UsernamePasswordAuthenticationFilter

9. Basic and Digest Authentication

- 9.1. BasicAuthenticationFilter
- 9.2. DigestAuthenticationFilter

10. Remember-Me Authentication

- 10.1. Overview
- 10.2. Simple Hash-Based Token Approach
- 10.3. Persistent Token Approach

10.4. Remember-Me Interfaces and Implementations

11. Session Management

11.1. SessionManagementFilter

11.2. SessionAuthenticationStrategy

11.3. Concurrency Control

12. Anonymous Authentication

12.1. Overview

12.2. Configuration

12.3. AuthenticationTrustResolver

IV. Authorization

13. Authorization Architecture

13.1. Authorities

13.2. Pre-Invocation Handling

13.3. After Invocation Handling

14. Secure Object Implementations

14.1. AOP Alliance (MethodInvocation) Security Interceptor

14.2. AspectJ (JoinPoint) Security Interceptor

15. Expression-Based Access Control

15.1. Overview

15.2. Web Security Expressions

15.3. Method Security Expressions

V. Additional Topics

16. Domain Object Security (ACLs)

16.1. Overview

16.2. Key Concepts

16.3. Getting Started

17. Pre-Authentication Scenarios

17.1. Pre-Authentication Framework Classes

17.2. Concrete Implementations

18. LDAP Authentication

18.1. Overview

18.2. Using LDAP with Spring Security

18.3. Configuring an LDAP Server

18.4. Implementation Classes

19. JSP Tag Libraries

19.1. Declaring the Taglib

19.2. The authorize Tag

19.3. The authenticationTag

19.4. The accesscontrollist Tag

20. Java Authentication and Authorization Service (JAAS) Provider

20.1. Overview

20.2. Configuration

21. CAS Authentication

21.1. Overview

21.2. How CAS Works

21.3. Configuration of CAS Client

22. X.509 Authentication

22.1. Overview

22.2. Adding X.509 Authentication to Your Web Application

22.3. Setting up SSL in Tomcat

23. Run-As Authentication Replacement

23.1. Overview

23.2. Configuration
